

**PD2: Single-phase HEPA Dust Extractor**

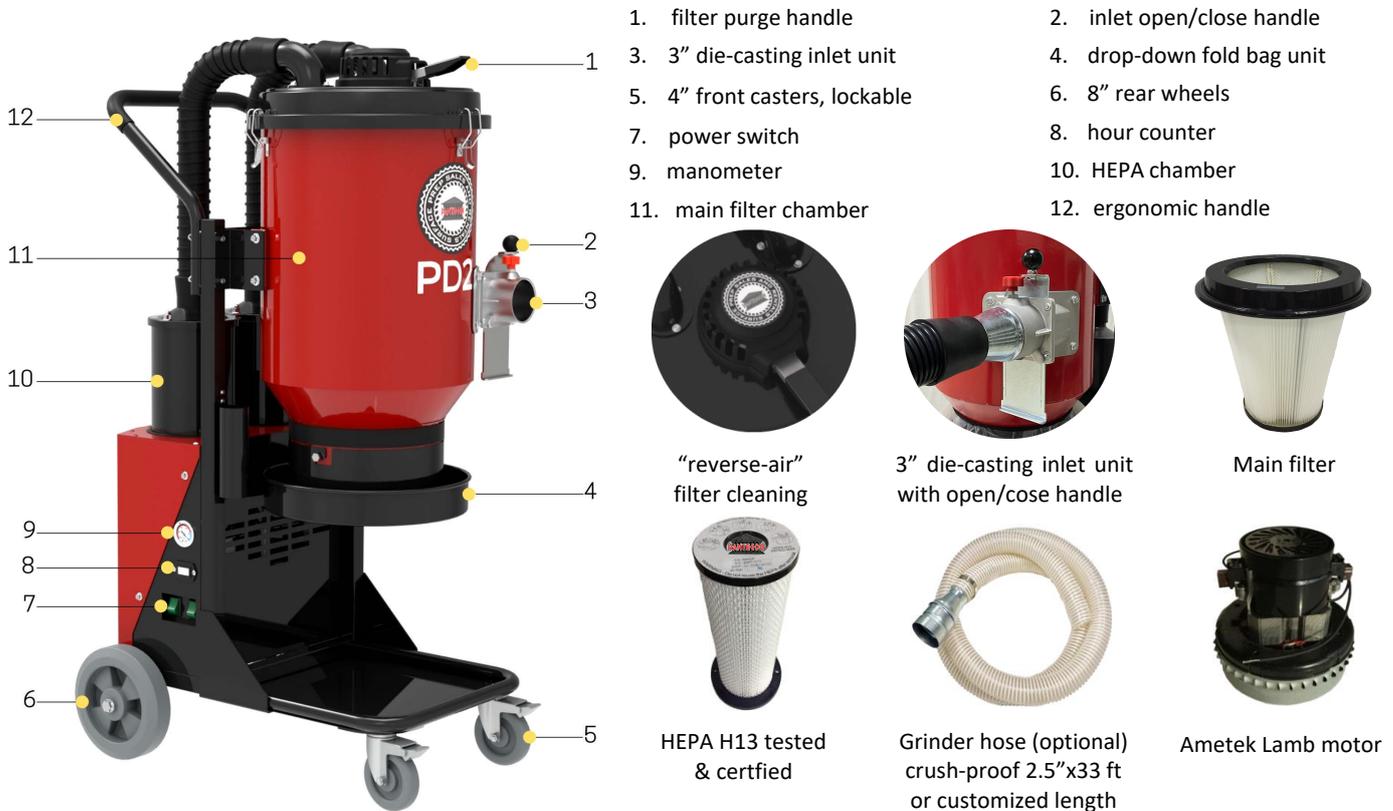

**PD2** is a two-motor HEPA dust extractor, which features a two-stage filtering system including a conical main filter and two HEPAs.

Equipped with two HEPA filters which are individually tested and certified complying H13 EN1822:2009, **PD2** separates 0.3um dust with an efficiency >99.99%, securing a high standard of quality and safety. **PD2** complies OSHA regulations for concrete dust handling.

With its unique “reverse-air” jet-pulse filter cleaning system, **PD2** cleans the filter in an easy and effective way. With the system, you don’t have to take the hose off the inlet and then block the inlet in order to conduct a filter cleaning, which usually creates another dust hazard. You just simply close the inlet by lifting the open/close handle before operating filter clean.

**PD2** comes with a complete floor cleaning tool kit, including a 2”x25 ft hose, Aluminum “S” wand, crevice tool, floor tools, and etc.

**PD2** is CE certificated. All electric components, including motor, switches, power cable, electric plug & receptacle, are UL and CUL/CSA certificated.

**Technical Data**

Volts (v)	230	120
Power (hp)	3.2	
Amps (A)	8	16
Air flow (cfm)	238	238
Water lift (inch)	90	100
Pre- filter (F8)	34 ft2, >99.5% @1.0 um	
HEPA filter (H13)	26 ft2, >99.99% @0.3 um	
Dimensions (inch)	24.7x22.0x48.0	
Net weight (lbs)	110
